Passthrough UV Sanitizers

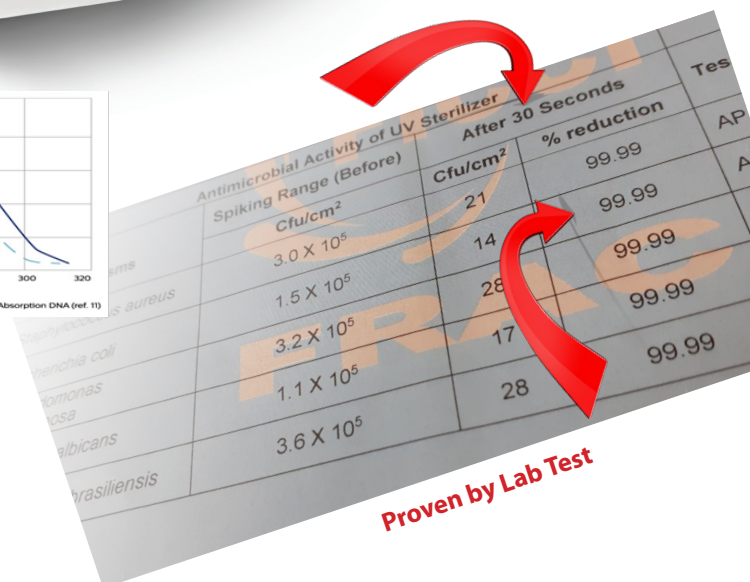

What is UV technology?

Ultra-Violet (UV) light is invisible to the human eye and is divided into UV-A, UV-B and UV-C.

UV-C is found within 100-280 nm range. Washmatic UV30 sanitizers have their main emission at 254 nm where the action on DNA is 85% of the peak value and 80% on the IES curve. As a result, our machines are extremely effective in breaking down the DNA of micro-organisms. This means that they cannot replicate and cause disease.
