

Slat belt tray conveyor system for dishwash areas

- Made of HDPE for long life and durability
- The low friction belt reduces the load on the drive by reducing friction at turns, allowing the belt to turn several corners over a considerable length using only one drive
- High impact plastic slats attached to side flexing chain. Slats overlap for maximum sanitation and safety, preventing jam-ups and keeping cutlery from falling in between slats.
- High-density poly wear strips ensure only plastic to plastic contact for low friction and wear.

- Construction in SS 304 for life long durability

Washing system for extra hygiene

- The cabinet has a standard built in belt wash. A wash tank contains wash arms located above and below the belt to thoroughly spray the belt with water.
